 THESE are questions which every prospect asks himself before deciding to buy. When the product is such that all these questions can be answered in the affirmative—the sale is made.

Such a product is the H. F. Bente & Co.'s line of "ART METAL RADIATOR ENCLOSURES." Their pleasing proportions and chaste lines contribute to make them exceptionally attractive, in fact, they are conceded by many to be the most beautiful Radiator Enclosures made. Finished in baked on enamel to harmonize in color, marble or wood grain reproduction they are thoroughly effective in concealing the unsightly radiators—converting them into attractive window seats or console effects. "ART METAL RADIATOR ENCLOSURES" also effectively protect walls, ceilings, draperies and decorations from the miniature volcanoes of dust carried upward by the air currents from the uncovered radiator coils.

Of much greater importance than is commonly considered, is the keeping of the heated air of the room in a proper humid state. Comfort and health depend on it. Equipped with a concealed humidifier, they scientifically introduce into the arid atmosphere of the home just the proper degree of moisture.

It is a pleasure to extend to all the fine courtesy and competent service of our organization, which are our proudest assets, even if they do not wish to make a purchase. The illustrations contained in this pamphlet while not large enough to show details, give a general idea—and it is with pleasure that we invite all to inspect our product.
